Fallen trees knocked down a few power lines.

Rain fell into the midday period on the 11th, from Huntington and Charleston vicinity on north. This laid down a boundary, with much warmer temperatures to its south. Dew points reached near 60 degrees over the southern coal field counties during the afternoon.

A bow echo raced out of eastern Kentucky during the late afternoon, and crossed West Virginia from Mingo County to Pocahontas County.

Cooling aloft and an approaching occluded front helped trigger thunderstorms over northeast Tennessee and southwest Virginia. These storms moved into southern West Virginia. Most of the storms produced brief heavy rain. One cell pulsed to a stronger level and produced large hail in Raleigh County.
